ELECTRICAL SPECIFICATIONS (CONT’)

Output Specifications

Short-circuit Protection.....Constant current with delayed latching method on the primary output. The 12V standby utilizes the hiccup method.

Overload Protection.....Constant current with delayed latching method on the primary output. The 12V standby utilizes the hiccup method. The constant current method allows for a 5-second delay before the power supply shuts down if the output current rating exceeds 110% to 130% of maximum rated output current. The input must be recycled manually or may be digitally reset.

FET Isolation..... Internal FET isolation provided for N+1 redundant operation.

Current Sharing.....Outputs will current share within 5% when interconnected by a single wire to pin 1A of each unit.

PS On.....The primary output is enabled only by mating pin 3C to a connector on the customer's backplane which connects it to output common.

DC OK.....A TTL high logic signal is provided to pin 3D when the DC outputs are within normal operating conditions.

Alert.....An open collector signal is provided to pin 4A to indicate any fault.

Over Temperature Protection.... The power supply will shut down if temperature is greater than 100°C (internal temperature). The power supply is self recovering once the internal temperature falls below 71°C.

AC OK..... A TTL high logic signal is provided to pin 2E when the input voltages are within normal operating conditions.

I²C Monitors temperature, output voltage, input voltage, input current, and output current; controls Fan speed, status LEDs. PMBUS compliant.
